

**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior version, and listings, of claims in the application:

**Listing Of All Claims**

1. (Currently Amended) A method comprising:  
  
receiving an information request from a user, wherein the information request includes voice data;  
  
searching a data network to extract content based on the information request; and  
  
sending the extracted content to be displayed to the user via a set-top box, wherein the set-top box to automatically switch to a cable television (CATV) channel to display the extracted content.
2. (Original) The method of claim 1, wherein receiving the information request from the user comprises receiving the information request via a public switched telephone system (PSTN).

3. (Original) The method of claim 1, wherein receiving the information request from the user comprises receiving the information request via a wireless network.
4. (Original) The method of claim 1, wherein the data network is the Intranet.
5. (Original) The method of claim 1, wherein the data network is a searchable medium capable of storing on-line information.
6. (Original) The method of claim 1, wherein displaying the extracted content to the user via the set-top box comprises sending the extracted content to the set-top box via a cable television (CATV) network.
7. (Original) The method of claim 1, wherein displaying the extracted content to the user via the set-top box comprises sending the extracted content to the set-top box via a satellite network.
8. (Original) The method of claim 1, wherein displaying the extracted content to the user via the set-top box comprises displaying the extracted content to one or

more of a television, a personal digital assistant (PDA), a printer, a laptop computer and a desktop computer via the set-top box.

9. (Currently Amended) A system comprising:

a port that receives an information request from a user, wherein the information request includes voice data; and

a search and analysis engine that searches a data network to extract content based on the information request, wherein the search and analysis engine sends the extracted content to be displayed to the user via a set-top box, wherein the set-top box to automatically switch to a cable television (CATV) channel to display the extracted content.

10. (Original) The system of claim 9, wherein the port receives the information request from the user via a public switched telephone system (PSTN).
11. (Original) The system of claim 9, wherein the port receives the information request from the user via a wireless network.
12. (Original) The system of claim 9, wherein the data network is the Intranet.

13. (Original) The system of claim 9, wherein the data network is a searchable medium capable of storing on-line information.
14. (Original) The system of claim 9, wherein the search and analysis engine sends the extracted content via a cable television (CATV) network to be displayed to the user via a set-top box.
15. (Original) The system of claim 9, wherein the search and analysis engine sends the extracted content via a satellite network to be displayed to the user via a set-top box.
16. (Original) The system of claim 9, wherein the extracted content is displayed to the user via the set-top box via one or more of a television, a personal digital assistant (PDA), a printer, a laptop computer and a desktop computer via the set-top box.
17. (Currently Amended) A machine-readable medium containing instructions which, when executed by a processing system, cause the processing system to perform a method, the method comprising:

receiving an information request from a user, wherein the information request includes voice data;

searching a data network to extract content based on the information request; and

sending the extracted content to be displayed to the user via a set-top box, wherein the set-top box to automatically switch to a cable television (CATV) channel to display the extracted content.

18. (Original) The machine-readable medium of claim 17, wherein receiving the information request from the user comprises receiving the information request via a public switched telephone system (PSTN).
19. (Original) The machine-readable medium of claim 17, wherein receiving the information request from the user comprises receiving the information request via a wireless network.
20. (Original) The machine-readable medium of claim 17, wherein the data network is the Intranet.

21. (Original) The machine-readable medium of claim 17, wherein the data network is a searchable medium capable of storing on-line information.
22. (Original) The machine-readable medium of claim 17, wherein displaying the extracted content to the user via the set-top box comprises sending the extracted content to the set-top box via a cable television (CATV) network.
23. (Original) The machine-readable medium of claim 17, wherein displaying the extracted content to the user via the set-top box comprises sending the extracted content to the set-top box via a satellite network.
24. (Original) The machine-readable medium of claim 17, wherein displaying the extracted content to the user via the set-top box comprises displaying the extracted content to one or more of a television, a personal digital assistant (PDA), a printer, a laptop computer and a desktop computer via the set-top box.
